

Carlson Connect 2020 is available in the Autodesk App Store

If you are a current user of Autodesk Civil 3d but have to regularly convert data from Carlson Software applications, Carlson Connect may be the solution for you!

LandXML continues to be the best and most complete solution for transferring data files between Carlson and most other survey, design and construction programs but Carlson Connect may be a better fit for some of you. The program runs inside of Civil 3d and has versions that run with 2018, 2019 and 2020.

The program allows you to transfer point and raw data between Civil 3D and Carlson SurvCE data collection. You can also export Civil 3D surfaces and alignments to Carlson files.
