

Are you using a DEFAULT field code in Carlson Field to Finish?

The screenshot shows a dialog box titled "Edit Field Code Definition - [DEFAULT]". It has three tabs: "General", "Symbol", and "Linetype". The "General" tab is selected. Inside the "General" tab, there are several fields and options:

- ☒ Processing ON
- Category: Unassigned (dropdown menu)
- Code: DEFAULT (text field)
- ☐ Use Code Sequence
- Define Sequence (button)
- Full Name: (empty text field)
- Description: (empty text field)
- Use Raw Description: Both (dropdown menu)
- Main Layer: _FIXME (text field)
- Set (button)
- Color... (button)
- Magenta (6) (color swatch)

This is a “slightly known” feature that’s built into Carlson Software’s Field to Finish feature. The Field to Finish command is available in the Carlson Survey, Construction and Takeoff programs. Please see the video below to learn how to use the DEFAULT field code to quickly identify and find points with random, non-standard, descriptions that may need your attention.
