

Are you using a DEFAULT field code in Carlson Field to Finish?

The screenshot shows a dialog box titled "Edit Field Code Definition - [DEFAULT]". It has three tabs: "General", "Symbol", and "Linetype". The "General" tab is selected. The dialog contains the following elements:

- Processing ON
- Category: Unassigned (dropdown menu)
- Code: DEFAULT (text input field)
- Use Code Sequence
- Define Sequence (button)
- Full Name: (empty text input field)
- Description: (empty text input field)
- Use Raw Description: Both (dropdown menu)
- Main Layer: _FIXME (text input field)
- Set (button)
- Color... (button)
- Magenta (6) (color selection)

This is a “slightly known” feature that’s built into Carlson Software’s Field to Finish feature. The Field to Finish command is available in the Carlson Survey, Construction and Takeoff programs. Please see the video below to learn how to use the DEFAULT field code to quickly identify and find points with random, non-standard, descriptions that may need your attention.
